Notes:

The Buck dewpoint (TDM.1) sensor was used as the source dewpoint sensor for this mission and AltGPS.3 (Novatel) was used as the primary altimeter source. AccZfilterI-GPS.2 was used for calculating vertical winds as there were two gaps in AccZfilterI-GPS.1.

Takeoff/Landing data: Data during landing and takeoff are potentially suspect. It is recommended that ground data not be used for scientific analysis.

SPECIAL NOTE!!! The variable names dpj\_wgs, dpj\_was, and dpj\_wz in the netCDF file represent vertical ground, vertical air, and vertical wind speeds respectively, computed using Dave Jorgensen's vertical wind algorithm. It is recommended that these values be used for vertical wind analysis.
